## **I.0** Introduction

Acer Associates, LLC (ACER) has prepared this report to summarize the findings of the survey for asbestos containing building materials (ACBMs) at 301 Lafayette Place in Brigantine, Atlantic County, New Jersey. The survey was completed on December 1, 2020.

The intent of the survey was to locate, quantify, and assess the present condition of asbestos containing building materials (ACBMs) throughout the building prior to its demolition.

The asbestos survey was conducted in accordance with the requirements of Federal and New Jersey State regulations pertaining to asbestos, including OSHA (29 CFR 1910.1001 & 29 CFR 1926.1101), EPA (40 CFR Part 61), TSCA Title II AHERA/ASHARA (40 CFR Part 763), and N.J.A.C. 8:60 and 12:120. The findings in this report are consistent with accepted principles and practice established and prescribed by the USEPA and AHERA.

This report, and the supporting data, findings, conclusions, opinions, and the recommendations it contains, represents the result of ACER's efforts. This report is not an asbestos abatement specification and should not be used for specifying removal methods or techniques. The results, assessments, conclusions, and recommendations stated in this report are factually representative of the conditions observed at this location on the date of the survey. ACER cannot assume responsibility for any change in conditions that occurred after the survey.

END OF SECTION

## 2.0 Survey for Asbestos Containing Building Materials (ACBMs)

ACER conducted this survey to locate, quantify, and assess the present condition of (ACBMs) at the site. Visual inspection and bulk sample collection were performed utilizing protocols and guidelines outlined in the United States Environmental Protection Agency (USEPA) document #560/5-85-024 - Guidance for Controlling Asbestos Containing Materials in Buildings, the EPA Asbestos Hazard Emergency Response Act (AHERA) of 1987, and the OSHA 1910.1101 Asbestos General Industry Standard (August 10, 1994). The facility was inspected physically, functional space by functional space, and homogeneous area by homogeneous area to determine the presence or absence of asbestos-containing materials. Please see the project limitations in Section 4.2 of this report for a comprehensive summary of the survey parameters.

The survey was characterized by close visual inspection of all accessible areas. Observations were made for friable and non-friable thermal surfacing and miscellaneous building materials. Suspected ACBMs were identified by visual inspection and bulk sampling in accordance with all applicable regulations and requirements. Materials were inventoried and examined for evidence of deterioration, damage and/or exposed friable material.

Random bulk material samples were collected of all suspected asbestos containing materials. Forty-six (46) bulk samples were collected of the potential ACBMs. The bulk samples collected were placed in zip-lock bags, labeled with an identifying code, and logged onto survey logs. Representative samples of each sampling area were then submitted to the laboratory to be analyzed for asbestos content. Sampling included collection of samples of each suspect material chosen at representative locations as specified by USEPA and OSHA standards, regulations, and/or guidelines. However, due to the inconsistencies of installation contractor methods and other factors, materials of similar type may have varying quantities of asbestos.

The bulk samples were submitted to EMSL Analytical, Inc. (EMSL) of Cinnaminson, New Jersey. The samples were analyzed via polarized light microscopy (PLM), using the "Test Method - for the determination of Asbestos in Bulk Building Materials," EPA/600/R-93/116, July 1993. This is a standard method of analysis in optical mineralogy, and a definitive method for the determination of asbestos in bulk samples. PLM is the method required by the EPA for the analysis of asbestos bulk samples. EMSL is a participant in the National Voluntary Laboratory Accreditation Program (NVLAP) for the analysis of asbestos containing materials via PLM. Copies of the Asbestos Bulk Sample Survey Logs and Certificates of Analysis have been provided in Appendix A.

Due to the serious shortcomings with the PLM methodology in analyzing non-friable organically bound materials (NOBs), samples of floor tiles and roofing materials were analyzed via Transmission Electron Microscopy (TEM) analysis. In the state of New Jersey, N.J.A.C. 12:120

requires the analysis of all Category I Non-Friable organically bound materials via TEM when PLM results are 1% or less (including findings that a sample contains no asbestos). TEM is required for a more definitive analysis of non-friable organically bound materials. Therefore, additional analysis via TEM (TEM/NOB) was performed on fourteen (14) samples to confirm or deny the presence of asbestos.

END OF SECTION

## 3.0 FINDINGS OF THE INSPECTION

The following table provides a summary of ACER's field observations and laboratory findings for the survey completed. Materials containing greater than one percent (1%) asbestos are classified as asbestos containing. The table includes the materials sampled, their assigned homogeneous material locations, quantities, sample numbers, and analytical results.

The following tables summarize the building materials identified during the inspection.

Location	Material	HM ID	Sample #	Result
I <sup>st</sup> Floor Living Room			Bulk-01	ND
I <sup>st</sup> Floor Kitchen	Drywall & assoc. Joint Compound	1/2	Bulk-02	ND

## 4.0 Conclusions & Recommendations

#### 4.1 Asbestos Containing Building Materials (ACBMs)

On December 1, 2020, ACER conducted an asbestos building survey of 301 Lafayette Place in Brigantine, Atlantic County, New Jersey.

The purpose of the inspection was to locate, quantify, and assess the present condition of ACBMs at the property. ACER made their best effort during exploratory demolition to access areas of the structure that may have ACBMs. This included, but was not limited to, pipe chases, walls, ceilings, roofs, ducts, and other areas hidden from view.

The analytical results for the bulk samples collected from the subject property identified all samples as <u>none detected for asbestos content</u>.

#### 4.2 Limitations

The inspection and sample procedures used to complete this survey are consistent with prevalent environmental and industrial hygiene standards for ACBMs. All reasonable efforts were made to identify the presence of ACBMs within the surveyed areas. Materials not identified in this report should be considered as not sampled.

## Summary Test Report for Asbestos Analysis in Accordance with N.J.A.C. 8:60 and 12:120 via EPA 600/R-93/116

				000/11-33/110	•		
Client Sample ID:	Bulk-45-Stucco					Lab Sample ID:	042030121-0045
Sample Description:	Exterior/Tan Stucco						
	Analyzed		Non	-Asbestos			
TEST	Date	Color	Fibrous	Non-Fibrous	Asbestos	Comment	
PLM	12/15/2020	Tan	5.0%	95.0%	None Detected	Result includes a inseparable attach	
Client Sample ID:	Bulk-45-Base Coat					Lab Sample ID:	042030121-0045A
Sample Description:	Exterior/Red Base Coat						
	Analyzed		Non	-Asbestos			
TEST	Date	Color	Fibrous	Non-Fibrous	Asbestos	Comment	
PLM	12/15/2020	Red	0.0%	100.0%	None Detected		
Client Sample ID:	Bulk-46-Stucco					Lab Sample ID:	042030121-0046
Sample Description:	Exterior/Tan Stucco						
	Analyzed		Non	-Asbestos			
TEST	Date	Color	Fibrous	Non-Fibrous	Asbestos	Comment	
PLM	12/15/2020	Tan	0.0%	100.0%	None Detected		
Client Sample ID:	Bulk-46-Base Coat					Lab Sample ID:	042030121-0046A
Sample Description:	Exterior/Red Base Coat						
	Analyzed		Non	-Asbestos			
TEST	Date	Color	Fibrous	Non-Fibrous	Asbestos	Comment	
PLM	12/15/2020	Red	0.0%	100.0%	None Detected		

TEM EPA NOB: Note: 12/30/20: Additional TEM analysis performed as per client request

EMSL maintains liability limited to cost of analysis. This report relates only to the samples reported above and may not be reproduced, except in full, without written approval by EMSL. This test report must not be used to claim product endorsement by NVLAP or any agency of the U.S. Government. EMSL bears no responsibility for sample collection activities or analytical method limitations. The laboratory is not responsible for the accuracy of results when requested to physically separate and analyze layered samples. PLM alone is not consistently reliable in detecting asbestos in floor coverings and similar NOBs.

Samples analyzed by EMSL Analytical, Inc. New York, NY AIHA-LAP, LLC--IHLAP Accredited #102581, NVLAP Lab Code 101048-9, NYS ELAP 11506, NJ NY022, CT PH-0170, MA AA000170
